

FOR IMMEDIATE RELEASE

THE LEAD-FREE MANHATTAN PROJECT CONFERENCE

Date: April 20th to May 1st, 2009

Facilitated By: ACI Technologies, Philadelphia, PA

Objective:

The two week, invitation only event will include a gathering of 16 of the top recognized experts in Pb-free electronics and mitigation best practices in a very concentrated effort to collectively integrate and document a set of known best practices. These best practices would be used to provide uniform guidance for hardware providers and end users in order to establish a common framework for actively managing the unplanned intrusions of Pb-free electronics into current aerospace and defense weapon systems, and handling the reliability and sustainment of Pb-free electronics in future systems.

Attendees:

This meeting will be a collaborative effort involving industry and academia's most respected and authoritative experts, in the mitigation and management of Pb-free electronics in aerospace and weapons systems designs. Guest speakers will also include top off the line industry experts in the field of Pb-free manufacturing for high reliability commercial applications.
