

**FOR IMMEDIATE RELEASE**

## **LEAD-FREE MANHATTAN PROJECT – PHASE 2**

**Date:** August 17th –August 28th, 2009

**Facilitated By:** ACI Technologies Inc. Philadelphia, PA

**Objective:**

The two week event will regroup the Phase 1 team of experts to identify the weaknesses and gaps that have been suggested during the documentation of Best Practices in the Phase I of the Pb-free Manhattan Project. Once the technology gaps have been identified, a roadmap of potential future projects will be outlined to resolve the disparities in the Pb-free mitigation strategy. The studies can range from package and PWB designs, to material, manufacturing, and reliability issues. From this roadmap, a benchmarking metric can be established that will produce criteria for assessing and prioritizing Pb-free projects

**Attendance is limited to invitees only.**

**Sponsored by**

Office of Naval Research in conjunction with the Joint Defense Manufacturing Technical Panel (JDMTP) through the Benchmarking and Best Practices Center of Excellence
